

PUBLISHED BY CAREY, LEA & BLANCHARD.

ANALYTICAL COURSE OF MATHEMATICS. BY MR. J. R. YOUNG.

1. **ELEMENTS OF GEOMETRY**; containing a New and Universal Treatise on the Doctrine of Proportion, together with Notes, in which are pointed out and corrected several important Errors that have hitherto remained unnoticed in the Writings of Geometers. 8vo. Revised and corrected, with Additions, by M. FLOY, Jun. A. B.

"His observations on the theory of parallel lines, the labour he has bestowed on the doctrine of proportion, as well as his corrections of many errors of preceding geometers, and supplying their defects, together with his minute attention to accuracy throughout, may be justly considered as rendering his performance valuable, especially to the learner."—*Philosophical Mag.* March, 1828.

2. **ELEMENTS OF ANALYTICAL GEOMETRY**: comprehending the Doctrine of the Conic Sections, and the general Theory of Curves and Surfaces of the second order, with a variety of local Problems on Lines and Surfaces. Intended for the use of Mathematical Students in Schools and Universities. Revised and corrected by JOHN D. WILLIAMS. 8vo.

"If works like the present be introduced generally into our schools and colleges, the Continent will not long boast of its immense superiority over the country of Newton, in every branch of modern analytical science."—*The Atlas*, July 25, 1830.

"We have to notice these excellent productions, as clear guides to the higher branches of science. They do infinite credit to Mr. Young; and no works of the same class can be more fit to be put into the hands of students."—*Literary Gazette*, May 28, 1831.

3. **AN ELEMENTARY TREATISE ON ALGEBRA**; Theoretical and Practical; with attempts to simplify some of the more difficult Parts of Science, particularly the Demonstration of the Binomial Theorem, in its most general form; the Solution of Equations of the higher orders; the summation of Infinite Series, &c. intended for the use of Students, with additions and improvements by SAMUEL WARD, Jun. 8vo.

"A new and ingenious general method of solving Equations has been recently discovered by Messrs. H. Atkinson, Holdred, and Horner, independently of each other. For the best practical view of this new method and its applications, consult the Elementary Treatise on Algebra, by Mr. J. R. Young, a work which deserves our cordial recommendation."—*Dr. Gregory's edition of Hutton's Mathematics*, vol. i. p. 261.

"For the summation of infinite series the author gives a new and ingenious method, which is very easy and extensive in its application."—*Newcastle Magazine*, November 1825.

The student who wishes to become acquainted with the science of Algebra, as it exists at the present day,

must study it in this book; for he can find it in no other which has issued from the American press.

We will go further, and pronounce our decided opinion, that however excellent the scholar's talents may be, he will, if he study any other single treatise on Algebra, be found, on trial of skill, to be inferior to the one who has faithfully studied this work. *Journal of the Franklin Institute*.

4. **ELEMENTS OF THE INTEGRAL CALCULUS**; with its Applications to Geometry, and to the Summation of Infinite Series, &c. Revised and corrected by MICHAEL O'SHANNESSY, A. M. 1 vol. 8vo.

"The volume before us forms the third of an analytical course, which commences with the 'Elements of Analytical Geometry.' More elegant text-books do not exist in the English language, and we trust they will speedily be adopted in our Mathematical Seminaries. The existence of such auxiliaries will, of itself, we hope, prove an inducement to the cultivation of Analytical Science; for, to the want of such elementary works, the indifference hitherto manifested in this country on the subject is, we apprehend, chiefly to be ascribed. Mr. Young has brought the science within the reach of every intelligent student, and, in so doing, has contributed to the advancement of mathematical learning in Great Britain."—*Presbyterian Review*, January, 1832.

"We remember the time when such a work as this would have been invaluable, and we do not think that any late publication has superseded the necessity of it."—*Spectator*, September 24, 1831.

5. **ELEMENTS OF THE DIFFERENTIAL CALCULUS**; comprehending the General Theory of Curve Surfaces, and of Curves of Double Curvature. Revised and corrected by MICHAEL O'SHANNESSY, A. M. 1 vol. 8vo.

"The whole Elements of the Differential Calculus, comprehending all that is most valuable in the large works of the most celebrated Analysts, are contained in one volume, beautifully printed on a fine paper, and neatly bound in cloth. It appears to be in every respect well fitted for a Class Book, and can scarcely fail to be very generally adopted."—*Presbyterian Review*, Sept. 1831.

"There are no affected changes of method: there is no parade of original plan, or of novelty of principle; and yet there is much original matter, much original reasoning, and, what is of more value than all questions about originality in an elementary treatise, there is a perspicuity, a unity of method prevailing in all its parts, that renders it more than any book we have seen peculiarly adapted to instruction.

"It is not, however, as an elegant and perspicuous development of the first principles of the Calculus, merely, that we have admired, and therefore recommended Mr. Young's little work. We have also found much to commend in it of a more profound character—much that we look for in vain in larger works, and indeed in all English books.

"The paralogisms of some other writers, distinguished ones too, are pointed out in the preface, and in the body of the work; and many steps which have hitherto been deemed unquestionable, have been shown by Mr. Young to be altogether fallacious. We wonder, indeed, when we see them pointed out, why they did not occur to ourselves nor to any body else till now; and we look upon the aptitude displayed in these detections to be highly characteristic of a mind which looks with a laudable anxiety to the purity of the fundamental principles of science."—*Philosophical Magazine*, October, 1831.

6. **THE ELEMENTS OF MECHANICS**, comprehending Statics and Dynamics, with a copious Collection of Mechanical Problems, intended for the use of Mathematical Students, in Schools and Universities; with numerous Plates. Revised and corrected by JOHN D. WILLIAMS. 1 vol. 8vo.
7. **ELEMENTS OF PLANE AND SPHE-**

RICAL TRIGONOMETRY; with its Applications to the Principles of Navigation and Nautical Astronomy, with the necessary Logarithmic and Trigonometrical Tables. By J. R. YOUNG. To which is added, some Original Researches in Spherical Geometry. By T. S. DAVIES, Esq. Revised and corrected by JOHN D. WILLIAMS. 1 vol. 8vo.

A TREATISE ON OPTICS, by SIR DAVID BREWSTER, L. L. D. F. R. S. &c. first American edition, with an Appendix, containing an elementary view of the application of analysis to Reflection and Refraction, by A. D. BACHE, A. M. Professor of Natural Philosophy and Chemistry in the University of Pennsylvania, &c. 1 vol. 12mo.

"This small volume is from the hands of a master; it is replete with exhibitions of the beautiful and surprising laws of light, which extends its influence from the smallest spire of grass to the remotest orb in the heavens. It is a work in which theory rests, in almost every case, on the sure basis of Mathematical demonstration.

"The appendix of Professor Bache has added materially to its value."—*Silliman's Journal*.

A TREATISE ON ASTRONOMY, by SIR JOHN F. W. HERSCHEL, F. R. S. &c. 1 vol. 12mo.

"The present treatise is in nowise inferior to its predecessor: it is characterized by the same agreeable and elegant style, the same facility of illustration—added to which it possesses unrivalled precision and accuracy of demonstration. Avoiding, therefore, the abstruse niceties and the transcendental mathematics of the subject, the author has nevertheless produced a volume calculated, we are fully persuaded, to impress upon his readers the magnitude and importance of the science, and to initiate them in no mean degree into its mysteries."—*Lit. Gazette*.

ELEMENTS OF MECHANICS, by JAMES RENWICK, Esq. Professor of Natural and Experimental Philosophy, Columbia College, N. Y. In 8vo. with numerous engravings.

"We think this decidedly the best treatise on Mechanics, which has issued from the American press, that we have seen; one, too, that is alike creditable to the writer, and to the state of science in this country."—*Am. Quar. Review*.

A TREATISE ON HYDROSTATICS AND PNEUMATICS, by the REV. DIONYSIUS LARDNER, L. L. D. F. R. S. &c. First American, from the first London edition, with Notes by BENJAMIN F. JOSLIN, M. D. Professor of Natural Philosophy in Union College. 1 vol. 12mo.

"It fully sustains the favourable opinion we have already expressed as to this valuable compendium of modern science."—*Lit. Gaz.*

"Dr. Lardner has made a good use of his acquaintance with the familiar facts which illustrate the principles of science."—*Monthly Mag.*

"It is written with a full knowledge of the subject, and in a popular style, abounding in practical illustrations of the abstruse operations of these important sciences."—*U. S. Jour.*

A TREATISE ON MECHANICS, by CAPT. KATER, and the REV. DIONYSIUS LARDNER. With numerous engravings. 1 vol. 12mo.

"A work which contains an uncommon amount of useful information, exhibited in a plain and very intelligible form."—*Olmsted's Nat. Philosophy*.

"This volume has been lately published in England, as a part of Dr. Lardner's Cabinet Cyclopædia, and has received the unsolicited approbation of the most eminent men of science, and the most discriminating journals and reviews, in the British metropolis.—It is written in a popular and intelligible style, entirely free from mathematical symbols, and disencumbered as far as possible of technical phrases."—*Boston Traveller*.

"Admirable in development and clear in principles, and especially felicitous in illustration from familiar subjects."—*Monthly Mag.*

"Though replete with philosophical information of the highest order in mechanics, adapted to ordinary capacities in a way to render it at once intelligible and popular."—*Lit. Gazette*.

PRELIMINARY DISCOURSE ON THE OBJECTS, ADVANTAGES, AND PLEASURES OF THE STUDY OF NATURAL PHILOSOPHY, by J. T. W. HERSCHEL, A. M. late Fellow of St. John's College, Cambridge.

"Without disparaging any other of the many interesting and instructive volumes issued in the form of cabinet and family libraries, it is, perhaps, not too much to place at the head of the list, for extent and variety of condensed information, Mr. Herschel's discourse of Natural Philosophy in Dr. Lardner's Cyclopædia."—*Christian Observer*.

"The finest work of philosophical genius which this age has seen."—*Mackintosh's England*.

"By far the most delightful book to which the existing competition between literary rivals of great talent and enterprise has given rise."—*Monthly Review*.

"Mr. Herschel's delightful volume. * * * We find scattered through the work instances of vivid and happy illustration, where the fancy is usefully called into action, so as sometimes to remind us of the splendid pictures which crowd upon us in the style of Bacon."—*Quarterly Review*.

"It is the most exciting volume of the kind we ever met with."—*Monthly Magazine*.

"One of the most instructive and delightful books we have ever perused."—*U. S. Jour.*

HUMAN PHYSIOLOGY, illustrated by numerous engravings, by ROBERT DUNGLISON, M. D. Professor of Physiology, Pathology, &c. in the University of Virginia, Member of the American Philosophical Society, &c. 2 vols. 8vo.

"It is the most complete and satisfactory system of Physiology in the English language. It will add to the

already high reputation of the author."—*Am. Jour. Med. Science.*

"A work like this, so abounding in important facts, so correct in its principles, and so free from errors arising from a prejudiced adherence to favorite opinions, will be cordially received and extensively consulted by the profession, and by all who are desirous of a knowledge of the functions of the human body; and those who are the best qualified to judge of its merits, will pronounce it the best work of the kind in the English language."—*Silliman.*

"This is a work of no common standing, it is characterized by much learning and research, contains a vast amount of important matter, and is written by a scholar and a man of taste. We are inclined to think that it will be placed by general consent at the head of the system of Physiology, now extant in the English language. Nor are we prepared to say that all things considered, its superior exists in any language. It has a character of its own, and is a true Anglo-American production, unsophisticated by garnish foreignism."—*Transylvania Journal.*

A NEW ABRIDGEMENT OF AINSWORTH'S DICTIONARY, English and Latin, for the use of Grammar Schools. By JOHN DYMCK, L. L. D. with Notes, By CHARLES ANTHON. 1 vol. 18mo.

In this edition are introduced several alterations and improvements, for the special purpose of facilitating the labour and increasing the knowledge of the young scholar.

GREEK AND ENGLISH LEXICON, by D. DONNEGAN. Abridged for the use of Schools. In 1 vol. royal 18mo. containing above 800 pages.

This work is printed on a handsome and distinct type, and contains as much matter as many of the larger lexicons; but owing to the form in which it is printed, it is sold at such price as to be within the reach of all students. It offers more advantages to the young student than any other lexicon now in use. The vocabulary is more extensive and complete—comprising not only words found in the classics, but also such as are found in the writings of Hippocrates and the Greek physicians. The meanings attached to words by the several writers are also given.

Words are given in alphabetical order in every poetical and dialectic variety.

The conjugation of verbs and flexion of nouns are more complete than in other lexicons;—the meanings of words fuller and more correct—there being first a primary and then a secondary meaning, each distinguished from the metaphorical and idiomatical. Phrases are also given when they note any peculiarity in signification. The etymology of words is only omitted where it is confused or disputed. There is nothing left out which the young student would find necessary in studying the classics, and which would enable him to understand the true meaning of a word. In short, in this work the essential advantages of a good Dictionary are combined with those of a good Grammar—advantages not found in any Greek and English lexicon now used.

MILLWRIGHT AND MILLERS' GUIDE, by OLIVER EVANS. New edition, with additions and corrections, by the Professor of Mechanics in the Franklin Institute of Pennsylvania, and a description of an improved Merchant Flour-Mill, with engravings, by C. & O. EVANS, Engineers.

A PRACTICAL TREATISE ON RAILROADS, AND INTERIOR COMMUNICATION IN GENERAL—containing an ac-

count of the performances of the different Locomotive Engines at, and subsequent to, the Liverpool Contest; upwards of two hundred and sixty Experiments with Tables of the comparative value of Canals and Rail-Roads, and the power of the present Locomotive Engines. By NICHOLAS WOOD, Colliery Viewer, Member of the Institution of Civil Engineers, &c. 8vo. with plates.

"In this, the able author has brought up his treatise to the date of the latest improvements in this nationally important plan. We consider the volume to be one of great general interest."—*Lit. Gaz.*

"We must, in justice, refer the reader to the work itself, strongly assuring him that, whether he be a man of science, or one totally unacquainted with its technical difficulties, he will here receive instruction and pleasure, in a degree which we have seldom seen united before."—*Monthly Rev.*

THE CHEMISTRY OF THE ARTS, on the basis of Gray's Operative Chemist, being an Exhibition of the Arts and Manufactures dependent on Chemical Principles, with numerous Engravings, by ARTHUR L. PORTER, M. D. late Professor of Chemistry, &c. in the University of Vermont. In 8vo. with numerous Plates.

In the work now offered to the American public, the practical character of the Operative Chemist has been preserved, and much extended by the addition of a great variety of original matter, by numerous corrections of the original text, and the adaptation of the whole to the state and wants of the Arts and Manufactures of the United States. Among the most considerable additions will be found full and extended treatises on the Bleaching of Cotton and Linen, on the various branches of Calico Printing, on the Manufacture of the Chloride of Lime, or Bleaching Powder, and numerous Staple Articles used in the Arts of Dying, Calico Printing, and various other processes of Manufacture, such as the Salts of Tin, Lead, Manganese, and Antimony; the most recent Improvements on the Manufacture of the Muriatic, Nitric, and Sulphuric Acids, the Chromates of Potash, the latest information on the comparative Value of Different Varieties of Fuel, on the Construction of Stoves, Fire-places, and Stoving Rooms, on the ventilation of Apartments, &c. &c. The leading object has been to improve and extend the practical character of the Operative Chemist, and to supply, as the publishers flatter themselves, a deficiency which is felt by every artist and manufacturer, whose processes involve the principles of chemical science, the want of a Systematic Work which should embody the most recent improvements in the chemical arts and manufactures, whether derived from the researches of scientific men, or the experiments and observations of the operative manufacturer and artisans themselves.

CHEMICAL MANIPULATION. Instruction to Students on the Methods of performing Experiments of Demonstration or Research, with accuracy and success. By MICHAEL FARADAY, F. R. S. First American, from the second London edition, with Additions by J. K. MITCHELL, M. D.

"After a very careful perusal of this work, we strenuously recommend it, as containing the most complete and excellent instructions for conducting chemical experiments. There are few persons, however great their experience, who may not gain information in many important particulars; and for ourselves, we beg most unequivocally to acknowledge that we have acquired many

new and important hints on subjects of even everyday occurrence."—*Philosophical Mag.*

GEOLOGICAL MANUAL, by H. T. De la Beche, F. R. S., F. G. S., Mem. Geol. Soc. of France. In 8vo. With 104 Wood Cuts.

"A work of first-rate importance in the science to which it relates, and which must henceforth take its place in the Library of every student in Geology."—*Phil. Magazine.*

ELEMENTS OF PHYSICS, OR NATURAL PHILOSOPHY, GENERAL AND MEDICAL, explained independently of Technical Mathematics, and containing New Disquisitions and Practical Suggestions. By NEILL ARNOTT, M. D. Second American from the fourth London edition, with Additions by ISAAC HAYS, M. D.

"Dr. Arnott's work has done for Physics as much as Locke's Essay did for the science of mind."—*London University Magazine.*

"We may venture to predict that it will not be surpassed."—*Times.*

"Dr. A. has not done less for Physics than Blackstone did for the Law."—*Morning Herald.*

"Dr. A. has made Natural Philosophy as attractive as Buffon made Natural History."—*French Critic.*

"A work of the highest class among the productions of mind."—*Courier.*

"We regard the style and manner as quite admirable."—*Morning Chronicle.*

"As interesting as novel-reading."—*Athenæum.*

"Never did philosophic hand wield a pen more calculated to win men to be wise and good."—*Edinburgh Observer.*

"Of this valuable, or we might say, invaluable work, a second edition has been speedily demanded by the public voice."—*Lit. Gaz.*

A DISCOURSE ON THE REVOLUTIONS OF THE SURFACE OF THE GLOBE AND THE CHANGES THEREBY PRODUCED IN THE ANIMAL KINGDOM. By BARON G. CUVIER. Translated from the French, with Illustrations and a Glossary. In 12mo. With Plates.

"One of the most scientific and important, yet plain and lucid works, which adorn the age.—Here is vast aid to the reader interested in the study of nature, and the lights which reason and investigation have thrown upon the formation of the universe."—*New Monthly Magazine.*

LESSONS ON THINGS, intended to improve Children in the Practice of Observation, Reflection, and Description; on the system of PESTALOZZI, edited by JOHN FROST, A. M.

The publishers request the attention of teachers, school committees, and all who are desirous of improving the methods of instruction, to this work, which is on a plan hitherto unattempted by any school-book in this country, and which has been attended with extraordinary success in England.

The following remarks on the work are extracted from the "Quarterly Journal of Education."

"This little volume is a 'corrected and re-corrected' edition of lessons actually given to children, and, therefore, possesses a value to which no book made in the closet can lay claim, being the result of actual experi-

ment. The work consists of a number of lessons, divided into five series; beginning with subjects the most easy and elementary, it gradually increases in difficulty, each successive step being adapted to the mind of the child as it acquires fresh stores of knowledge.

OUTLINES OF HISTORY, from the Earliest Records to the Present Time. Prepared for the Use of Schools, with Questions, by JOHN FROST, A. M.

Philadelphia, July 10th, 1831.

"The 'Outlines of History,' I consider an excellent class-book of general history for the use of schools. The questions added by Mr Frost, are a most valuable auxiliary for the teacher as well as the pupil. I shall use the 'Outlines' in my school, and cordially recommend it to parents and teachers." S. C. WALKER."

Philadelphia, April 30th, 1831.

"DEAR SIR,—I have just received a copy of your edition of the 'Outlines of History.' From a cursory perusal, I am disposed to give it a high rank as a school-book. So well satisfied am I with the arrangement and execution of the work, that I intend to put it immediately into the hands of a class in my own school.

"Very respectfully, your obedient servant,
"MR. JOHN FROST." "LEVI FLETCHER."

A COLLECTION OF COLLOQUIAL PHRASES on every topic necessary to maintain Conversation, arranged under different heads, with numerous remarks on the peculiar pronunciation and use of various words—the whole so disposed as considerably to facilitate the acquisition of a correct pronunciation of the French. By A. BOLMAR. One vol. 18mo.

A SELECTION OF ONE HUNDRED PERRIN'S FABLES, accompanied by a Key, containing the text, a literal and free translation, arranged in such a manner as to point out the difference between the French and the English Idiom, also a figured pronunciation of the French, according to the best French works extant on the subject; the whole preceded by a short treatise on the sounds of the French language, compared with those of the English.

LES AVENTURES DE TELEMAQUE, par FENELON, accompanied by a Key to the first eight books; containing like the Fables—the text—a Literal—and Free Translation; intended as a Sequel to the Fables.

A COMPLETE TREATISE ON THE GENERALS OF FRENCH NOUNS; in a small pamphlet of fourteen pages.

This little volume, which is the most complete of the kind, is the fruit of great labour, and will prove of immense service to every learner.

ALL THE FRENCH VERBS, BOTH REGULAR AND IRREGULAR, in a small volume.

NEUMAN'S SPANISH AND ENGLISH DICTIONARY. New Edition, in one vol. 16mo.
